

Anubhav Kumar

Web Developer — Full-Stack (React · TypeScript · Node)

myacc5010@gmail.com · +91 94300 10866 · Bengaluru, India · github.com/dingdongkkk · linkedin.com/in/anubhav-kumar

SUMMARY

Full-stack web developer with internship experience migrating a live product's API, database and authentication, and 25+ public repositories spanning typed React/Next.js front ends, Node and Python APIs, and deployed apps. Two-time hackathon winner and technical coordinator for web development in two college technical clubs. Comfortable owning a feature end to end — schema and migrations, API contract, accessible UI, and the live deploy.

SKILLS

Languages	TypeScript, JavaScript (ES2022+), Python, SQL, HTML5, CSS3
Frontend	React 19, Next.js 15 (App Router), Vite, Tailwind CSS, MapLibre GL, Canvas/SVG, Web Workers, responsive & accessible UI
Backend	Node.js, Fastify, Express, FastAPI, REST API design, JWT & session auth, rate limiting, background jobs
Data	PostgreSQL (NeonDB), SQLite/libSQL (Turso), Cloudflare D1, Drizzle ORM, SQLAlchemy, Alembic migrations
Tooling	Git & GitHub, Docker, Vercel, Cloudflare Workers, npm, automated testing, CI-style verification scripts
Other	Neural networks from scratch (backprop, Adam), numerical simulation, geospatial data (GeoJSON, DEM), LLM APIs

EXPERIENCE

Web Developer Intern — Internloom (internloom.com) Jul 2026 – Present

Next.js, TypeScript, Supabase (Postgres, Auth, RLS), Drizzle ORM, SQL migrations

- Completed the migration of the product's API off a legacy PHP backend, reconciling the web/API contract and closing production escalations.
- Moved the database and authentication to Supabase: authored the schema, Drizzle models and row-level-security policies, then enforced RLS on the API request path.
- Added Google sign-in across local and hosted environments, fixing redirect allow-lists and provider configuration.
- Redesigned the landing page on the company brand palette and built the pages missing from the migrated contract.
- Wrote migration documentation, diagnostics, seed scripts and verification tooling so the rest of the team could reproduce and validate the new stack.

LEADERSHIP & ACTIVITIES

Technical Coordinator — <CodeIO/>, CSE BMSCE Nov 2025 – Present

Senior Coordinator (Sep 2026 – present); Junior Coordinator (Nov 2025 – Sep 2026) — web development

Technical Coordinator — Protocol, CSE BMSCE Jun – Sep 2026

Junior Core — web development

SELECTED PROJECTS

FlowShield — flood simulation & early-warning dashboard · [live](#) · [code](#) Sep 2026

React 19, TypeScript (strict), Vite, MapLibre GL, Web Workers, Python data pipeline, Vercel

- Built a 3D interactive map of 315 terrain cells over Bengaluru's real drainage network, with playback, scenario comparison and live risk counters.
- Wrote the numerical simulation engine in dependency-free TypeScript and ran it in a Web Worker, keeping a 3-hour simulation at ~0.5 s without blocking the UI.
- Implemented a neural network from scratch in JavaScript (no ML framework) — backpropagation and Adam — trained on 4,000 self-generated runs; R^2 0.995 on held-out data, enabling instant search across ~600 response plans.
- Backed the app with 21 automated verification checks and a reproducible key-free data pipeline (elevation, 6,839 drains, 78k buildings).

Dayzeros — focus app & cloud platform (full-stack monorepo) · [code](#) Sep 2026

Next.js 15 App Router, Fastify, Better Auth, Drizzle ORM, PostgreSQL (NeonDB), Tailwind v4

- Designed a monorepo splitting a typed REST API (tasks, stats, auth) from a Next.js front end, with documented architecture, schema and API reference.
 - Implemented session-based authentication and route protection, plus migrations and a seeded database.
 - Built a pixel-art UI with a WebAudio ambience synthesiser and Pomodoro workflow.
- COMMIT-ed** — open-source event leaderboard · [code](#) Aug 2026
Node.js (one dependency), libSQL/Turso, signed sessions, Docker
- Built public submission, badge generation and live standings, scoring pull requests by GitHub difficulty labels behind an admin approval gate with revoke/reinstate.
 - Hand-rolled signed sessions and server rendering with a near-zero dependency footprint.

EDUCATION

B.E. Computer Science & Engineering — B.M.S. College of Engineering, Bengaluru 2025 – 2029

ACHIEVEMENTS

- **Winner of two hackathons (2026)** — shipped working, deployed products under 24-hour deadlines.
- Published 25+ open-source projects, including a flood simulator with a neural network written from scratch and a reproducible geospatial data pipeline.
